

BGB In The Wind Industry

BGB were the first slip ring manufacturers to design a dedicated wind turbine slip ring for hub control systems. As leaders in the field BGB are always innovating and improving products to suit customers in all industries.

With over 30 years in the slip ring and brush holder market, BGB are the European Leader in Wind turbine slip ring technology and keep at the forefront of innovations in the wind sector. BGB currently supply products to major players in the wind industry, including: Vestas, Siemens, Gamesa, Suzlon and ABB and also provide smaller units (3 way slip rings and brush-gear) to small turbine manufacturers (Proven and Westwind).

BGB Products currently serving the wind industry include:

- > Monitoring & Power to the hub (Blade Feathering)
- > Power take off from the Frequency Converter
- > Generator slip rings and brush holders
- > Bespoke slip ring packages
- > Cable looms & harnesses for turbines
- > Lightning Defence & static earth dissipation systems
- > Brush holders
- > Wirefree Ethernet Bridge monitoring systems.
- > Otilinc FORJ system (a fibre optic solution which is not influenced by vibration, humidity, heat, magnetism or other typical slip ring disturbances)
