

## Moulded Slip Rings Assemblies 1-3 ways

Designed as a range of robust high speed moulded slip ring assemblies that also lend themselves to a multitude of slower and medium speed applications. Ring material is standard as phosphor-bronze grade PB1 to BS 1400, but some units use copper and are identified as such in the table. The insulation medium is thermoset glass-reinforced DMC based on unsaturated polyester resin (Grades 43-2036/597 and 43-2036/623). Applications include: Alternators, Slip Ring Motors, Frequency Changers, Cable Reeling Drums, Cable Bunching Machines, Rotary Display Lighting, Electro-Magnetic Clutches, Wind Generators, Packaging Machines, Rotary Welding Machines, Leisure Rides and Power and Signal Transfer Packages.
